The election filed December 13, 2004 has been entered and made of record as paper no. 1204.

Applicant's election without traverse of claims 1-16 in the reply filed on December 13, 2004 is acknowledged.

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-9, drawn to a semiconductor device, classified in Class 257, subclass 335.
- II. Claims 10-16 and 21-24, drawn to a hot swap protection device, classified in Class 327, subclass 1+.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 10 and 21 do not require two pair of current carrying electrodes formed on the same major surface as required by claim 1. The subcombination has separate utility such as an amplifier instead of hot swap protection device as required by claim 10.

Because these inventions are distinct for the reasons given above and, as shown by the above different classifications, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
